EXECUTIVE SUMMARY Statistics and surveys about the prevalence and incidence of vision
loss are available from Red reflex Wikipedia The red reflex refers to the reddish orange
reflection of light from the back of the eye or fundus observed when using an ophthalmoscope
or retinoscope The reflex relies on the transparency of optical media tear film cornea aqueous
humor crystalline lens vitreous humor and reflects off the fundus back through media into the
aperture of the ophthalmoscope Retinoblastoma Clinical presentation evaluation and
INTRODUCTION Retinoblastoma is the most common primary intraocular malignancy of
childhood and accounts for 10 to 15 percent of cancers that occur within the first year of life
Retinoblastoma typically presents as leukocoria in a child under the age of two years Untreated
retinoblastoma is a deadly disease however with advances in treatment survival in the
contemporary era is gt 95 percent Eyelid Lesions Diagnosis and Treatment Eyelid lesions are
more often than not benign Accurate diagnosis by an ophthalmologist is based on history and
clinical examination When in doubt any suspicious lesion should undergo biopsy Here we offer
a brief review of some of the more common eyelid lesions that an ophthalmologist may
